Waves

My hometown Busan, South Korea, is located next to the East sea. This winter, I went back home and saw this LED installation on the beach. (reference:https://youtu.be/seC-xtdvFpY) This installation shows the ability of people to feel the "ocean" even at night. From this inspiration, I made "waves" by MAX. At first, I used a metro object to create a loop of waves. It works but after a few loops, it starts to mess up the order. Then, Kiki mentioned a delay object, so I changed the metro to delay; in result, there's no crossing. Also, I gave different delay values for each wave to depict wavelengths. I tried to make waves sound, too. Used a drunk object worked well to create a random wave-like sound. Since I like the deep sound of waves, I set up the range to 30 with small steps, 3, for a murmuring feeling.
